Jeremiah and Justin's Barrio Restaurant

1. Introduction- We have chosen to give a face-lift to a restaurant and website named Barrio as we feel we can make it better and more user-friendly.

The value and the benefits include easier on the eyes, easier to navigate, user friendly, and displaying more useful information first.

2. *Expected List of Features:*

Navigation Bar- used for navigating different areas of the website

Same page and external linking

Forms- such as cards to fill out information

Media- images and videos to showcase the business

Social media- for end-users to follow and view social accounts

Carousel- slideshow for cycling through a series of content

3. *Market Survey:*

   A. https://www.sienatavern.com/
   B. https://www.banditliquors.com/
   C. https://www.primeandprovisions.com/
   D. https://barsiena.com/
   E. http://buildersbuilding.com/

The layout is very similar in that fact that we wish to display images with opacity as our background, showcasing content in Carousels, and having links in the nav bar which drop down the page. Some differences are that we wish to change the layout of the forms and contact page as a whole.
